

short stretch compression bandage

Comprilan is a short stretch compression bandage made from 100% cotton and is specifically designed for the management of venous leg ulcers, lymphedema and edema.

Unlike long stretch bandages, Comprilan provides both compression and high resistance to stretch to increase venous and lymphatic return.

Indications:

- Venous ulcers
- Venous insufficiency
- Edema
- Lymphedema
- Thrombophlebitis
- Post sclerotherapy

Features & Benefits:

- Interlocking weave provides short stretch to ensure consistent compression
- Anatomically conforming allowing freedom of movement
- Provides high working pressure and low resting pressure
- Easy-care and durable, Comprilan can be washed and reused
- 100% cotton bandage, cool and light, the open weave fabric allows the skin to breathe

Comprilan provides effective management of edema

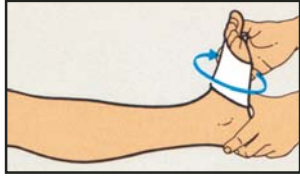

Available in seven sizes

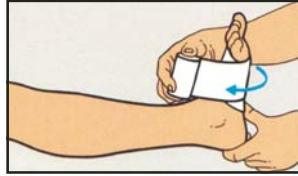

Simple Spiral Technique

short stretch compression bandage

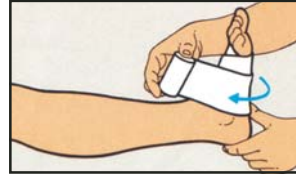

Simple spiral bandaging technique is ideal when managing venous leg ulcers.

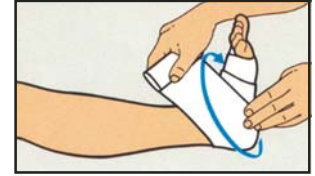

1. Begin bandaging from the medial aspect at the Basal joint of the toes towards the lateral aspect of the foot.

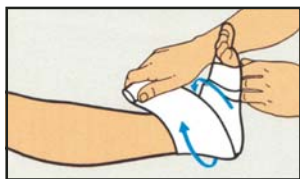

2. Repeat step 1 to secure bandage.

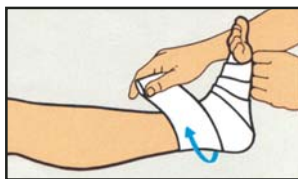

3. The bandage continues with a turn across the metatarsals.

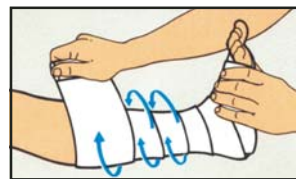

4. Take the bandage over the lower heel and return over the metatarsals.

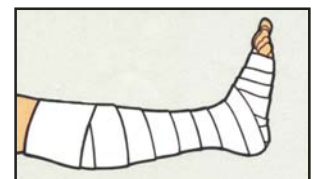

5. Take the next turn over the upper heel and Achilles Tendon continuing medially.

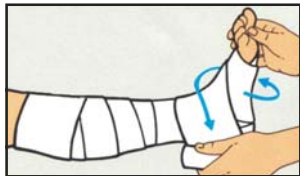

6. Cover the ankle by wrapping the bandage spirally.

7. Continue spiralling the bandage up the leg, overlapping each turn by half of the bandage width.

8. Finish bandaging approximately two fingers width below the Tibial tuberosity.

9. If a second bandage is applied, it can start at the Basal joints or the ankle but should be spiraled in the opposite direction.

Fiber Content:
100% cotton bandage
